

Scotty Creek, Sonoma County

Adult Migrant and Spawning Activity Survey

Feb. 27, 1968

By: E. Farmer and Warden J. Peelen

Extent: From mouth to 1¼ miles upstream

Method: On foot

Fish Observed: None

Spawning Activity: 30 definite redds were observed in the area surveyed. The first redds were observed 500 yards upstream from the confluence with the Pacific Ocean. The water was turbid and limited visibility to approximately 6 inches. No estimate of amount of spawning gravels present or extent of utilization was gained due to water turbidity.

Flow: Flow this date was approximately 12 c.f.s.

Note: No construction activity was observed in the surveyed part of Scotty Creek.
